

Aim

Upgrade fisher's application.

User's view

	two menus
	
	<p>we want to add all fishes and takes to the class FisherReaderWriter</p> <p>to initialize an instance of this class we have to set a filename</p> <p>therefore an appropriate file-dialog appears</p>
	save all added fishes and takes to given file
	if we want loading from an existing file, we select load and gets a file-dialog
	if success then display this message ...

	<p>... press get and all data should be displayed again</p>
	<p>statistics displays either this (already known) information ...</p>
	<p>or for each fisher the period between earliest and latest take.</p>

Hints

- use FisherSerializer.jar (and attached javadoc)
- make appropriate jobs for professional deployment
