Text - Analyser V1 page 1

## Idea

Words of a text should be stored in an array and sorted by different criteria.

## **Class diagram:**

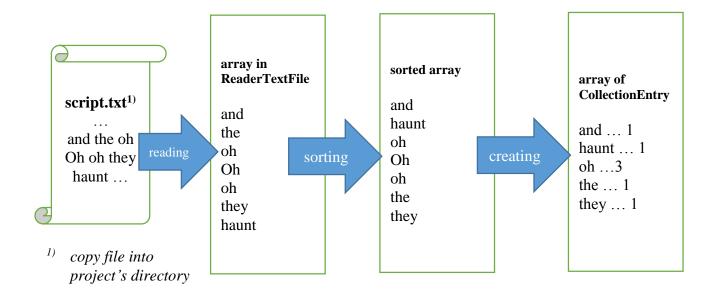

## **Details:**

ReaderTextFile	reads a text from a given file and stores each single word in a collection	
	class is ready for use	
	for more information see directory "doc"	
AnalyserTextFile	reads words from an array of words	
	and creates a <i>CollectionEntry</i> for each word	
	see also "hints"	
CollectionEntry	consists of	
	• word	
	• frequency of the word in the text (upper-/lowercase should be ignored)	
ComparatorCE*	necessary for sorting array of <i>CollectionEntry</i>	
ComparatorByName	necessary for sorting array of words
