Theme

A little product administration app needs an upgrade.

Features

|	
	an additional column for entering values to decrease stock-entries
	both users enter amount to decrease ...
	...select *dec stock* , update is done in database (if possible) and table shows current view (see *on stock* of each user, as only committed data can be seen)
	both user change to another producer and want to decrease product's stock ...
	... 2nd user decreases stock and commits ...

	...1st user decreases (and do not see 21 − 1 = 20 (!))
	1st user commits, meanwhile 2nd user displays entries of producer (CeDe AG)
